Rebar

2023-06-01. ACI committee 318 (2014). ACI 318-14 Building Code Requirements for Structural Concrete and Commentary. American Concrete Institute (ACI). ISBN 978-0870319303

Rebar (short for reinforcement bar or reinforcing bar), known when massed as reinforcing steel or steel reinforcement, is a tension device added to concrete to form reinforced concrete and reinforced masonry structures to strengthen and aid the concrete under tension. Concrete is strong under compression, but has low tensile strength. Rebar usually consists of steel bars which significantly increase the tensile strength of the structure. Rebar surfaces feature a continuous series of ribs, lugs or indentations to promote a better bond with the concrete and reduce the risk of slippage.

The most common type of rebar is carbon steel, typically consisting of hot-rolled round bars with deformation patterns embossed into its surface. Steel and concrete have similar coefficients of thermal expansion...

This is an automated report generated by COIBot.If your username appears here, it means that COIBot has been tracking a link that you have added to one or more articles. COIBot tracks links for one of the following "blacklist and monitor" reasons, which can be found above the actual records (if they are not there, the link is not monitored/blacklisted anymore):

The link has been reported to e.g. Wikipedia talk:WikiProject Spam, Wikipedia:Conflict of interest/Noticeboard, or a spam-blacklist;

The link has been blacklisted on User:XLinkBot (formerly User:SquelchBot) or on User:AntiSpamBot (retired)

The link has been added by someone whose username is very similar to the domain being added;

The IP related to the link is added by someone with an IP close to the IP of the link.
