Power-to-weight ratio

*"1981 Kremer K4 |". January 8, 2016.
"THE MXA WRECKING CREW RIDES A
75-HP JAWA 500 SPEEDWAY BIKE". June
23, 2019. Archived from the original on April 14*

Power-to-weight ratio (PWR, also called specific power, or power-to-mass ratio) is a calculation commonly applied to engines and mobile power sources to enable the comparison of one unit or design to another. Power-to-weight ratio is a measurement of actual performance of any engine or power source. It is also used as a measurement of performance of a vehicle as a whole, with the engine's power output being divided by the weight (or mass) of the vehicle, to give a metric that is independent of the vehicle's size. Power-to-weight is often quoted by manufacturers at the peak value,

but the actual value may vary in use and variations will affect performance.
